

Solution Requirements

Date	30 june 2026
Team ID	XXXXXX
Project Name	Smart Lender
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

A **Functional Requirement (FR)** defines the specific features, services, and operations that the Smart Lender system must perform. These requirements describe **what the system should do** to meet user needs, such as accepting loan details, predicting loan approval, and displaying the result.

A **Non-Functional Requirement (NFR)** defines the quality attributes and performance standards of the Smart Lender system. These requirements describe **how the system should perform**, including aspects such as security, speed, reliability, scalability, usability, and maintainability.

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Admin login for secure access.	High
2	Authorization levels	Admin manages the system; users submit loan details.	High

3	External interfaces	Uses Flask, ML model, and scaler for prediction.	Medium
4	Transactions processing	Processes user input and predicts loan approval.	High
5	Reporting	Displays loan prediction result.	High
6	Business rules, etc.	Prediction is based on applicant details and credit history.	High
7	Compliance to laws or regulations	Protects user data and follows privacy standards.	High
8	<i>Other</i>	Simple and user-friendly interface.	High

Acceptance Criteria

1	Performance & Speed	Fast prediction response.	Within 2 seconds
2	Scalability	Supports multiple users.	500+ users
3	Security & Data Privacy	Secure user data and input validation.	HTTPS & secure storage
4	Reliability & Availability	System should work without interruptions.	99.9% uptime
5	Usability & Accessibility	Easy-to-use responsive interface.	User-friendly design
6	<i>Other</i>	Easy to update and maintain.	Modular code structure
